Tamra Bedford, Cosmetic RN Highlights IPL Photofacial Technology for San Ramon Residents Seeking Sun Damage Reversal

August 04, 2026

SAN RAMON, CA - August 04, 2026 -
Tamra Bedford, Cosmetic RN, a medical spa in San Ramon, California, continues to address the growing demand for non-invasive treatments that reverse sun damage and age spots common among residents of the sun-soaked Tri-Valley region. The practice, led by registered nurse Tamra Bedford who brings over 20 years of aesthetic medicine experience, specializes in Intense Pulsed Light (IPL) photofacial treatments using the advanced Cutera Limelight system.

The Cutera Limelight IPL technology targets specific skin concerns that develop after prolonged sun exposure, including brown spots, age spots, sun damage, and uneven skin tone. The system delivers precise wavelengths of light energy that penetrate the skin's surface, breaking down melanin deposits responsible for discoloration while stimulating collagen production for improved skin texture.

During a typical IPL photofacial session at the San Ramon facility, patients experience a treatment lasting approximately 30 to 45 minutes. The procedure begins with protective eyewear application, followed by the application of cooling gel to the treatment area. The IPL handpiece is then systematically moved across the skin, delivering controlled light pulses that feel similar to a gentle rubber band snap against the skin.

"The ideal candidate for IPL photofacial treatments is someone with fair to medium skin tone who has accumulated sun damage over the years, particularly those brown spots and redness that make skin appear older than it actually is," states Tamra Bedford, RN, owner of the practice. "For our San Ramon clients who spend considerable time outdoors enjoying California's climate, I typically recommend a series of three to five treatments spaced about four weeks apart to achieve optimal results that look completely natural."

Post-treatment recovery remains minimal, with most patients returning to normal activities immediately.

Treated brown spots may initially darken before flaking off within seven to ten days, revealing clearer skin underneath. Mild redness resembling a light sunburn typically subsides within a few hours. Patients are advised to avoid direct sun exposure and maintain consistent sunscreen use to protect their investment in clearer skin.

The medical spa setting ensures that all Tamra Bedford IPL photofacial treatments are performed under strict medical protocols. As a registered nurse, Bedford personally conducts each treatment session, applying her extensive clinical experience to customize treatment parameters based on individual skin types and concerns. This medical oversight distinguishes the practice from non-medical aesthetic providers, ensuring both safety and efficacy.

Beyond IPL therapy, Tamra Bedford offers comprehensive aesthetic services including medical microneedling, injectable treatments, chemical peels, and laser skin rejuvenation. The practice operates from its location at 160 Sunset Drive, Suite 110, serving clients throughout San Ramon and the broader Tri-Valley area. The facility maintains an association with Dr. Stephen Ronan's physician-owned medical spa and Blackhawk Plastic Surgery, further reinforcing its commitment to medically supervised aesthetic care.
