AdvantaClean of Kansas City Expands Emergency Water Removal Service Capacity Ahead of Storm Season

June 23, 2026

LENEXA, KS - June 23, 2026 -
AdvantaClean of Kansas City has announced enhanced readiness protocols and expanded response capabilities for its emergency water removal service as the region prepares for another active storm season. The water damage restoration company, which has served the Kansas City metropolitan area for 14 years, has implemented additional measures to ensure rapid response times for residential and commercial properties facing water damage emergencies.

The announcement comes as weather patterns indicate increased potential for severe storms across Jackson County, Johnson County, Leavenworth County, Platte County, and Wyandotte County. The company has bolstered its 24/7 emergency response team and equipment inventory to address the anticipated surge in water damage incidents that typically accompany severe weather events.

"Water damage requires immediate attention to prevent structural deterioration and mold growth," said Kevin Full, owner of AdvantaClean of Kansas City. "Every hour matters when dealing with water intrusion. Our expanded emergency water removal service capabilities ensure we can respond to multiple simultaneous incidents while maintaining the rapid response times our community depends on during crisis situations."

The company's comprehensive approach to water damage restoration includes emergency water extraction, structural drying, moisture control, and mold prevention services. Advanced moisture detection equipment and industrial-grade dehumidification systems enable the team to address both visible water damage and hidden moisture that can lead to long-term structural issues.

Beyond emergency response, the company provides complete restoration services including fire damage cleanup, smoke removal, sewage removal, and sanitization. The BBB-accredited business maintains an A+

rating and has established itself as a trusted resource for property owners facing water-related disasters.

Recent industry data shows that water damage claims represent one of the most frequent insurance losses for property owners, with costs escalating significantly when response is delayed. The Institute of Inspection Cleaning and Restoration Certification emphasizes that professional water removal within the first 24-48 hours can reduce restoration costs by up to 40 percent.

"Preparation and rapid response are critical factors in minimizing water damage impact," added Full. "Our team undergoes continuous training on the latest restoration techniques and maintains certifications in water damage restoration, mold remediation, and indoor air quality management."

The company also offers preventive services including basement waterproofing, crawl space encapsulation, and moisture control solutions designed to protect properties before water damage occurs. Additional services include air duct cleaning, dryer vent cleaning, radon testing and mitigation, and COVID-19 sanitization.

AdvantaClean of Kansas City operates as part of a national network with over 25 years of industry experience. The company accepts various payment methods including cash, check, and major credit cards, making emergency services accessible to property owners during crisis situations. The local team maintains headquarters in Lenexa and provides coverage throughout the greater Kansas City metropolitan area.
