Ferrell Electric Provides Commercial New Construction Electrician Services in Georgia and South Carolina

June 23, 2026

MARTINEZ, GA - June 23, 2026 -
Ferrell Electric provides commercial new construction electrician services to businesses and contractors in Georgia and South Carolina. The company, which began operations in 1992, performs licensed electrical work that meets applicable building codes and National Electrical Code standards. This includes full electrical system design and installation for new commercial builds.

During commercial new construction projects, electricians work closely with contractors to develop electrical layouts. They ensure plans comply with Georgia building codes and the National Electrical Code. The process involves installing wiring, panels, lighting, and other electrical components from the initial stages of construction. This coordinated approach supports safe and functional commercial spaces upon completion.

Ferrell Electric handles the full scope of electrical needs in commercial new construction. Electricians draw and install systems that support office buildings, retail spaces, industrial sites, and other commercial properties. The work includes proper placement of circuits, outlets, and fixtures while maintaining code compliance throughout the project. Testing occurs at the end of installation to verify proper operation.

Additional aspects of commercial new construction electrician services cover integration with other building systems. Ferrell Electric electricians complete these tasks according to established standards. The company obtains required permits for most electrical projects as part of its standard procedure while maintaining compliance with applicable standards in Georgia and South Carolina.

Service extends to multiple communities, including Appling, Augusta, Evans, Grovetown, Harlem, Hephzibah, and Martinez in Georgia, as well as Aiken, Belvedere, Burnettown, Edgefield, Gloverville, Langley, North Augusta, and Trenton in South Carolina. This coverage supports commercial new construction electrician services across the listed areas in both states.

"Commercial new construction electrician services require detailed coordination with contractors and strict adherence to code requirements," said Adam Dietrich, President of Ferrell Electric. "The team focuses on completing installations according to established standards from the start of each project."

The company operates as a locally owned and operated business. It has accumulated more than 33 years of work history in the region. Electricians treat each service call with care and respect. All personnel hold the necessary qualifications for the tasks performed, and the company maintains licensed status under License Number EN213209.

"Over the years, the company has supported a range of commercial new construction projects in the communities it serves across Georgia and South Carolina," said Adam Dietrich, President of Ferrell Electric. "This includes full system installations that meet the needs of various business types."

Ferrell Electric also manages residential electrical work, although commercial new construction projects form a regular part of its operations. The same code-compliance standards apply across all job types. Installations account for factors such as building size, power requirements, and future expansion needs. Cleanup follows each phase, with full testing to confirm proper function.

The company follows procedures that include upfront pricing estimates before work begins. This applies to commercial new construction electrician services involving wiring, layouts, and system integration. Every job receives review for adherence to applicable building codes and NEC standards. Permits are handled by state-licensed electricians to support full compliance in Georgia and South Carolina.

Ferrell Electric continues to provide commercial new construction electrician services in its established service areas. The focus remains on following procedures that support code-compliant outcomes in commercial properties. This approach has been in place since the company started in 1992 and covers the full spectrum of needs from initial planning to project completion.

Established in 1992, Ferrell Electric is a locally owned electrical company based in Martinez, Georgia. It provides licensed commercial and residential electrical services to homes, businesses, and industrial sites. With over three decades of experience, the company focuses on expertise, safety, and quality craftsmanship while serving multiple communities in Georgia and South Carolina.
