

## **Gym Flooring Mats for Garage and Home-Based Workouts Restocked for Online Sales at Strongway Gym Supplies**

*June 24, 2026*

Coventry, UK - June 24, 2026 - PRESSADVANTAGE -

Strongway Gym Supplies has announced the restocking of its gym flooring mat range, adding renewed inventory to a category that has become an increasingly common feature of home exercise environments. The latest update includes flooring options intended for garages, spare rooms and dedicated workout areas where surface protection and equipment stability remain practical considerations.

As domestic fitness spaces continue to evolve, flooring has become a more prominent part of home gym planning. Exercise equipment is often assembled gradually over time, and many users now place greater emphasis on creating structured environments that support regular training while protecting underlying surfaces from wear and impact.

The company stated that interlocking foam flooring remains one of the more versatile options for multipurpose spaces. Lightweight construction and modular layouts allow sections to be arranged according

to room dimensions, making them suitable for workout areas that may also serve other household functions.

The interlocking foam mats are ideal for their functionality and efficiency. Specifications regarding their thickness and dimensions are available at: <https://strongway.co.uk/products/gym-flooring-foam-mats-interlocking-exercise-mats-eva-floor-tiles-non-slip-rubber>.

Home exercise spaces vary considerably in size and configuration. Some are assembled in converted garages, while others occupy sections of spare bedrooms or unused corners of living spaces. As a result, flooring has become an important consideration alongside larger equipment such as benches, racks, treadmills and free weights.

Protective surfaces are commonly used to create a more defined exercise area. They can also help minimise direct contact between equipment and existing flooring materials. In settings where strength training equipment is used regularly, dedicated flooring often becomes part of a longer-term arrangement rather than a temporary addition.

The rise of home-based exercise has also encouraged a more organised approach to gym design. Rather than accumulating equipment without a clear layout, many individuals now assemble training environments with attention given to movement space, storage access and equipment placement. Flooring often serves as the foundation for this arrangement, helping separate workout zones from the surrounding room.

Academic research has also examined the benefits associated with structured exercise carried out at home. A 2019 study titled "Effects of Home-Based Exercise Training Systems, Combined with Diet, on Cardiometabolic Health", published in the International Journal of Exercise Science and conducted in Los Angeles, USA, found that a 12-week home-based exercise programme combined with dietary control led to significant improvements in body weight, fat mass, blood pressure, and aerobic fitness. Conducted by Roberts CK, Segovia DE, Lankford DE, and colleagues, the study highlighted the potential effectiveness of structured home-based training systems, when combined with diet, in improving key markers of cardiometabolic health. The findings reinforce the importance of creating environments that make regular exercise easier to maintain over extended periods.

Garage gyms have become particularly associated with this approach because they provide an adaptable space for combining cardio machines, free weights and multi-function strength equipment. In these environments, durable flooring materials are frequently selected to accommodate changing exercise routines throughout the week.

Strongway Gym Supplies also confirmed the availability of rubber flooring options designed for more

demanding workout environments. These thicker mats are ideal for exercises like snatches, clean and jerks, and deadlifts. They can be explored at: <https://strongway.co.uk/products/gym-flooring-rubber-mats-1m-x-1m-x-15mm>.

Rubber mats are commonly incorporated into exercise spaces where heavier equipment is used on a regular basis. Unlike temporary floor coverings, dedicated gym flooring is often selected as a permanent part of the exercise environment. Many users incorporate these systems during the early stages of building a home gym, while others add them later as their equipment collections expand.

Attention has also shifted towards maintaining organised training areas as home gyms become more established. Storage arrangements, accessory management and efficient use of available space increasingly influence purchasing decisions. Equipment is often selected not only for its training function but also for how it fits into a broader layout.

Strongway Gym Supplies continues to maintain a wide range of products designed to support these environments, including storage and organisational accessories such as dumbbell racks, plate racks, and more. Further information can be found at: <https://strongway.co.uk/collections/storage-accessories>.

The company stated that practical additions such as storage racks, holders and organisational equipment can help streamline workout spaces where several categories of equipment are used together. These additions are frequently introduced alongside flooring systems to establish more structured exercise areas.

Domestic fitness environments have become increasingly individual in design, reflecting different exercise preferences, room sizes and long-term goals. Some spaces prioritise strength training, while others accommodate mixed routines involving cardio, mobility work and resistance exercises. Flooring often becomes a common element regardless of the training approach because it supports the overall organisation of the space.

The latest restocking announcement forms part of Strongway Gym Supplies' ongoing efforts to maintain availability across equipment categories associated with home fitness environments. By continuing to expand inventory in foundational product areas such as flooring and storage, the company is supporting the practical requirements involved in building sustainable exercise spaces within domestic settings.
