

Rosebud Decks & Porches: TrexPro Platinum and TimberTech Platinum Deck Specialists Building Custom Outdoor Living Across the Twin Cities

June 24, 2026

NORTH ST PAUL, MN - June 24, 2026 - PRESSADVANTAGE -

Rosebud Decks & Porches, the custom deck and porch company led by owner Joe Becker and operating as Rosebud Construction, LLC, designs and builds outdoor living structures across the Twin Cities metropolitan area. The company specializes in low-maintenance composite and PVC decking and holds the highest professional certification tier from two major composite manufacturers, Trex and TimberTech. Based in North St. Paul, Minnesota, it serves homeowners and commercial clients throughout the region, selecting materials and installation methods suited to the demands of the Minnesota climate.

Joe Becker built the company on a clear premise: outdoor structures in Minnesota face a demanding set of conditions, and they call for materials and installation techniques that hold up over decades rather than seasons. Freeze-thaw cycles, heavy snow loads, and hot, humid summers each place a different kind of stress on a deck. Frost depth shapes how footings are placed, since a deck that is not anchored below the frost line can heave and shift as the ground freezes and thaws through the winter. Snow loads influence framing spans and connections, summer sun and humidity affect how surfaces wear, and water management determines how long a substructure lasts. That field knowledge informs every material recommendation, framing decision, and installation method the team brings to a project.

The company's focus on composite and PVC reflects how these materials perform in the region. Capped composite and PVC boards resist fading, staining, and scratching, hold their color across seasons of sun and snow, and require little upkeep beyond routine cleaning, with no sanding or sealing required. For Minnesota homeowners weighing decades of ownership, that balance of durability and low maintenance is central to the company's material recommendations.

Rosebud Decks & Porches holds the top certification tier available from both manufacturers it most often

builds with. TimberTech Platinum Pro is the highest level in the TimberTech by AZEK professional program, covering composite decking, aluminum railing, and trim systems. TrexPro Platinum is the highest tier in the Trex certified contractor program, covering Trex composite decking, railing, and accessory systems. Both credentials require demonstrated installation volume, technical training, and ongoing accountability to manufacturer standards.

Composite decking is the core of the company's work, installed through Trex, TimberTech by AZEK, Fiberon, and Deckorators systems, with PVC decking offered as a low-maintenance alternative. Deck framing is engineered for Minnesota loads using steel through Fortress Building Products, aluminum through TimberTech, and composite systems through Owens Corning. Matching the substructure to the site and to the finished decking is a large part of how a deck holds its shape and performs over time.

The team builds the complete range of deck types, including platform, raised, multi-level, freestanding, rooftop, pool, cantilevered, and covered decks, along with combined porch and deck projects. Supporting structures and finishes include railings in composite, glass, vinyl, aluminum, steel, and cable, through Trex, TimberTech, Deckorators, Fiberon, Muzata, Ideal Railing, Viewrail, and Keylink; pergolas in flat-roof, attached, freestanding, gable, arched, louvered, and fully custom configurations, through Struxure (Cabana X), Apollo, and Sundance; porches, including covered, screened-in, and three-season rooms, with screen enclosures through EZ-Screen and SCREENEZE; underdeck systems in panel, gutter-and-channel, snap-in, custom-fabricated, and Haven Underdecking configurations; deck skirting in lattice, vinyl, and composite profiles; privacy screens and privacy walls; and deck lighting, covering design consultation, installation, wiring and electrical work, automation, and landscape lighting integration, through Tru-scapes Landscape Lighting, Trex, TimberTech, and Westbury.

Each project begins with design, where the layout, materials, and structure are matched to the home, the lot, and how the space will be used. Foundation installation and permit acquisition are handled as part of every new build, so each project meets local code from the ground up. That sequence, from footings through framing to the finished surface and railings, reflects the company's focus on decks and porches as its specialty rather than as one service within a broader remodeling business.

Beyond new construction, Rosebud Decks & Porches performs deck repair, deck inspection, deck additions, deck remodeling, and complete deck rebuild and replacement, supporting both new outdoor structures and the upkeep of existing ones.
