

North Valley Solar Power Highlights Local Solar Panel Providers Serving Antioch, CA Homeowners

June 25, 2026

ANTIOCH, CA - June 25, 2026 -

North Valley Solar Power, a residential solar installer based at 5179 Lone Tree Way #561, Antioch, CA 94531, is reinforcing its presence as one of the established solar panel providers in Antioch and across Contra Costa County. With a local office, an in-house installation team, and a service footprint spanning Brentwood to Pittsburg, the company is increasing visibility around its existing solar energy services for homeowners across the East Bay.

Antioch homeowners exploring renewable energy have a growing list of solar panel providers to consider. North Valley Solar Power distinguishes its offering through same-day or next-day consultations, custom system design, in-house installation, and ongoing system monitoring. The company serves neighborhoods including Contra Loma, Lone Tree Valley, Country Hills, Deer Valley, Dallas Ranch, Mira Vista, and Black Diamond Hills, covering ZIP codes 94509 and 94531 from the Antioch office.

Services available through the Antioch location include solar energy consultation, professional solar

installation, solar system financing, solar battery storage, solar inverters, and warranty and local service support. Every project follows a three-step process: a free consultation with a local solar expert, a custom system design with financing options and a written proposal, and full installation with tax credit guidance backed by partner warranties. Post-installation, the company provides system monitoring and maintenance to identify performance issues early.

In addition to providing residential solar services, North Valley Solar Power emphasizes educating homeowners throughout the decision-making process. The company works with customers to explain system sizing, expected energy production, available financing options, and long-term maintenance considerations so they can make informed choices based on their property's energy needs and budget. This customer-focused approach is intended to simplify the transition to renewable energy while providing ongoing local support after installation.

"As a locally based team, we know what Antioch homeowners need from solar panel providers, clear answers, fair pricing, and someone who picks up the phone after the install," said Jake Bevans, Sales Manager at North Valley Solar Power. "Our job is to make going solar simple, and to stand behind every system we put on a roof in this community."

The Antioch office is staffed by Chad Skinner (Office Manager), Jake Bevans (Sales Manager), Eric Taylor (Lead Installer), and Lance Clemens (Lead Backup Battery and Main Panel Upgrade Installer). North Valley Solar Power partners with Tesla Energy, Sunrun, Sunnova, and Travis Credit Union for product supply and financing options, and is a member of the Better Business Bureau and the local Chamber of Commerce.

The Antioch office is open Monday through Saturday from 7:00 AM to 10:00 PM, closed Sunday. Homeowners can request a no-obligation quote by calling (925) 255-7668, emailing antioch@northvalleysolarpower.com, or visiting <https://northvalleysolarpower.com/location/antioch-ca/>. The office sits near the intersection of Lone Tree Way and Deer Valley Road, accessible by car from downtown Antioch via A Street and Lone Tree Way, or by bus from the Antioch BART station.

North Valley Solar Power also operates offices in Stockton, Concord, and Pleasanton, supporting customers throughout Northern California with the same local installation and service model used in Antioch.

About North Valley Solar Power

North Valley Solar Power is a residential solar company serving Antioch, CA and the surrounding Contra Costa County region. The company offers solar panel installation, battery storage, solar inverters, system

financing, energy consultations, and ongoing warranty and local service support. With a local team in Antioch and partnerships with leading solar product and financing providers, North Valley Solar Power helps homeowners transition to clean, renewable energy through a transparent, three-step process backed by post-installation monitoring and maintenance.
