

Best Roofing & Siding Company Grows Its Central Ohio Service Lineup with Professional Gutter Installation

June 25, 2026

WORTHINGTON, OH - June 25, 2026 -
Best Roofing & Siding Company, a family-owned exterior contractor serving residential and commercial properties throughout Central Ohio, has expanded its service offerings to include professional gutter installation. The addition brings drainage management under the same roof as the company's established roofing, siding, skylight, and storm damage services ? giving property owners a single point of contact for exterior improvement projects that have historically required multiple contractors.

The company, operating out of its Worthington, Ohio office and serving communities across the Columbus metro area, has built its reputation on a coordinated approach to exterior work. That philosophy extends to the new gutter offering. Rather than treating drainage as a standalone task, installation planning is structured to account for roof geometry, downspout positioning, and compatibility with existing siding and roofing materials.

Drew Paetow, owner of Best Roofing & Siding Company in Worthington, Ohio, noted that the expansion

reflects what the company observes regularly on residential projects throughout the region. "Water management affects multiple areas of exterior performance at once," Paetow said. "Roofing, siding, and gutters influence one another over time, and when those systems aren't planned together, small issues tend to compound. Adding gutter installation to our lineup means we can address that relationship directly rather than handing it off."

Gutters play a functional role in exterior longevity that is easy to underestimate. When properly installed, they direct runoff away from roof edges, siding, entry points, and foundation-adjacent areas ? reducing exposure to uncontrolled water flow that can accelerate deterioration across all of those surfaces. Poorly fitted or absent gutters are a common contributor to siding staining, fascia damage, and erosion around the building perimeter.

Central Ohio's climate puts residential gutter systems under consistent stress year-round. The Columbus area receives roughly 42 inches of precipitation annually, spread across seasons with few reliably dry months. Spring and summer bring periods of heavy rainfall that test drainage capacity, while winters deliver 20 to 30 inches of snowfall alongside frequent temperature fluctuations that create a particularly damaging pattern for homes without adequate gutter performance. As temperatures rise during the day, melting snow runs toward gutters and roof edges ? then refreezes when temperatures drop overnight, forming thick ice buildups known as ice dams. When gutters and downspouts freeze, melting snow has nowhere to go ? water spills over the sides, runs down siding, and collects around the foundation. The consequences extend well beyond the gutter itself: sagging or detached gutters from ice weight, water staining on fascia and siding, and moisture infiltration into the home's structure are among the most common outcomes when drainage systems aren't matched to the conditions they're operating in. For Central Ohio homeowners, a properly installed, correctly sized gutter system isn't a seasonal concern ? it's a year-round structural one.

Best Roofing & Siding Company's gutter service focuses on seamless gutter and downspout installation, along with gutter covers designed to reduce debris accumulation and long-term maintenance demands. Seamless gutters ? fabricated to fit each home's measurements rather than assembled from pre-cut sections ? reduce the number of joints where leaks are most likely to develop. The company uses materials from manufacturers it identifies as top-tier in the category, consistent with its broader product standards across roofing and siding lines.

The company already holds certifications from major exterior manufacturers, including GAF, Owens Corning, and CertainTeed on the roofing side, and is a certified James Hardie installer for fiber cement siding. It holds Home Improvement Contractor License HIC-L00702 and carries a Better Business Bureau accreditation. Paetow has emphasized that the same standards applied to those established services ? factory-trained installation teams, thorough site evaluation, and a structured quality assurance process ? will carry through to gutter projects.

Operationally, the expansion also creates an earlier opportunity to identify drainage-related concerns during project planning. When gutter work is evaluated alongside a roofing or siding project rather than separately, installation teams can observe runoff patterns, drainage concentration points, and transitions between exterior materials before installation begins. In practice, this can reduce the need for corrective adjustments after the primary work is complete.

"Exterior improvements are most effective when they're planned as connected systems," Paetow said. "Adding gutters to what we already do allows us to apply that approach more consistently and give homeowners a clearer picture of how everything works together."

The service expansion also responds to a practical consideration for homeowners managing exterior repair or replacement projects. Coordinating multiple contractors for related work ? scheduling site visits, aligning timelines, reconciling different installation standards ? adds friction to projects that are already disruptive. By consolidating gutter installation under existing operations, Best Roofing & Siding Company aims to reduce that coordination burden without sacrificing attention to installation quality.

Financing is available for gutter projects through the company's existing partnerships with Enhancify and Service Finance, LLC, which offer options across credit levels for homeowners managing unplanned or larger-scale exterior work.

Best Roofing & Siding Company serves residential properties across the Columbus area, including Worthington, Upper Arlington, Dublin, Westerville, Powell, Lewis Center, and surrounding communities. The company operates a structured project process that runs from initial consultation and inspection through proposal, installation, and a final quality assurance review before project closeout.
