

Go Industries Inc Expands Truck Mudguards Line for Heavy-Duty Dually Vehicles

July 07, 2026

Richardson, TX - July 07, 2026 -
Go Industries Inc, a Richardson, Texas-based manufacturer of truck and fleet accessories, has expanded its product line to address the growing demand for heavy-duty mud protection solutions for dually trucks across North America. The company's enhanced selection of truck mudguards now includes multiple material options and mounting configurations designed specifically for dual rear wheel pickup trucks from major manufacturers including Chevrolet, GMC, Ford, and Dodge Ram.

The expansion comes as the commercial trucking and heavy-duty vehicle market continues to grow, with fleet operators and individual truck owners seeking more durable protection against road debris, salt, and other materials that can damage vehicle paint and create hazards for following traffic. Dually trucks, which feature dual rear wheels on each side for increased load capacity and stability, require specialized mud flap solutions due to their unique wheel configurations.

"The demand for quality mud protection has increased significantly as more businesses rely on dually trucks

for commercial operations," said a Go Industries spokesperson. "Our expanded product line addresses the specific needs of these heavy-duty vehicles while maintaining the durability and compatibility that fleet managers and truck owners expect."

Go Industries' mud flap sets are manufactured from non-recycled rubber materials and are available in several configurations including Classic Dually Sets, Stainless Steel Dually Sets, and Diamond Tread Dually Sets. The products range in price from $37.41 to $209.00, providing options for various budgets and application requirements. Each set is engineered to fit all dually truck models, with customers able to select specific year, make, and model configurations for optimal compatibility.

The importance of proper mud flap installation extends beyond vehicle protection. Many states require commercial vehicles to have adequate mud flaps to prevent debris from being thrown onto roadways and potentially causing accidents or damage to other vehicles. The historical significance of mud flaps dates back to 1944 when Oscar Glenn March, a truck driver at Tinker Air Force Base during World War II, coined the term while developing early versions of the protective equipment.

Beyond the standard mud flap sets, Go Industries also offers mounting brackets and accessories separately, allowing for replacement of worn components without requiring purchase of complete sets. This modular approach supports fleet maintenance programs where regular replacement of wear items is essential for vehicle safety and compliance.

The company's manufacturing facility in Richardson produces the entire line of mud protection products alongside other truck accessories including grille guards, bumper replacements, headache racks, and specialized equipment for law enforcement vehicles.

Go Industries has been serving the truck accessory market since 1978, maintaining Platinum Status with the Specialty Equipment Market Association (SEMA). The company's product line encompasses front and back end protection systems, custom manufacturing services, and specialized solutions for fleet operators and law enforcement agencies. In addition to traditional payment methods, the company has adapted to modern commerce by accepting cryptocurrency transactions.
