The Winfield Collection Supports Backyard Birdwatching Interest with Birdhouse and Feeder Woodworking Patterns

June 26, 2026

LINDEN, MI - June 26, 2026 -
The Winfield Collection has observed growing participation in backyard birdwatching among woodworking hobbyists and outdoor enthusiasts as summer activities increase. The company provides full-sized, functional bird feeders and birdhouse woodworking patterns for birdwatchers for residential yards and gardens.

Backyard birdwatching has gained traction as a relaxing hobby that connects people with local wildlife. Many individuals turn to woodworking to build custom structures that attract songbirds, woodpeckers, and other species while adding decorative elements to outdoor spaces. Patterns from The Winfield Collection support projects using standard cedar boards, plywood, and basic tools.

Mike Easler, the President of The Winfield Collection, noted the alignment with seasonal trends. "Birdhouse and feeder projects allow hobbyists to combine practical woodworking with opportunities to observe nature up close," said Easler. "These designs help create inviting habitats that can be enjoyed throughout the warmer months and beyond."

The wood patterns cover a variety of styles, including rustic log cabin birdhouses, whimsical wacky birdhouse and feeder sets, cedar men bird feeders, and gazebo-style feeders. Additional options feature old west themes, buggy designs, and tea set-inspired pieces. Many projects incorporate layering techniques for depth or use contrasting stains instead of paint for low-maintenance finishes. Dimensions typically range from compact porch-mounted units to larger post or tree designs up to 24 inches tall.

Full-size patterns include complete instructions for cutting, assembly, and finishing. Hobbyists report success with these designs in attracting birds while providing durable results that withstand outdoor conditions. Squirrel feeders offer complementary projects that redirect attention from bird seed supplies. Butterfly houses extend the focus to pollinators, supporting broader garden ecosystems.

The resurgence of hands-on DIY activities has contributed to interest in such functional woodworking. Participants value the ability to customize projects for specific yard layouts or bird species preferences common in their regions. Scroll saw users and those with jigsaw experience find intricate details accessible through the traceable templates. Materials such as cedar contribute to natural appeal and weather resistance.

Easler highlighted the educational value of these projects. "Woodworking for birdhouses and feeders encourages skill building in measurement, assembly, and finishing while fostering appreciation for backyard wildlife," he observed. "It is rewarding to see families and individuals engage with these traditional crafts during the summer months."

Projects like songbird feeders with drop-in dishes or suet options accommodate different food types, including seeds, mealworms, or fruit. Winter fence top designs extend usability into colder seasons, though many focus on spring and summer activity. The patterns support both functional homes and decorative accents that enhance garden aesthetics without requiring advanced expertise.

This focus on bird-related woodworking reflects broader trends in outdoor personalization and connection to nature. Enthusiasts often share completed projects within hobby communities, inspiring others to try similar builds. The accessibility of full-size patterns helps ensure accurate proportions and successful outcomes for users at various skill levels. Additionally, these projects encourage creativity, allowing makers to explore their artistic sides while also engaging with the environment.

Such woodworking not only provides a fulfilling hobby but also fosters a sense of accomplishment and pride in creating handmade items. The Winfield Collection, established in 1981, is an established provider of full-size woodworking patterns and plans. The company supports woodworking enthusiasts, scroll saw users, DIY crafters, and hobbyists by providing designs for yard art, seasonal projects, birdhouses, feeders, and other woodworking applications.
