

Project 2 Payment Introduces Advanced HVAC Invoicing Software to Streamline Contractor Billing Operations

June 30, 2026

ST PAUL PARK, MN - June 30, 2026 -

Project 2 Payment, a software solutions provider for contractors, has introduced specialized invoicing software designed to address the unique billing challenges faced by HVAC contractors. The platform combines project estimation, invoice management, and digital payment collection into a single integrated system aimed at improving cash flow and operational efficiency for heating, ventilation, and air conditioning businesses.

The software addresses common pain points in the HVAC industry, where contractors often struggle with delayed payments, complex project billing, and time-consuming administrative tasks. By automating key aspects of the billing process, the platform enables HVAC professionals to focus more time on service delivery while maintaining consistent cash flow through faster payment collection.

"HVAC contractors face distinct challenges when it comes to billing, from managing seasonal fluctuations to

handling emergency service invoicing," said Jay Bruber, founder of Project 2 Payment. "Our platform was developed specifically to address these needs, providing contractors with tools that not only simplify their billing processes but also help them maintain healthier cash flow throughout the year."

The Project 2 Payment hvac invoicing software includes features for creating detailed project estimates, tracking multiple jobs simultaneously, and collecting digital payments directly from clients. The system integrates with existing business workflows, allowing contractors to generate professional invoices immediately upon job completion and send them directly to customers via email or text message.

Beyond basic invoicing capabilities, the platform provides comprehensive project tracking tools that help contractors monitor payment status, identify overdue accounts, and analyze revenue patterns. These insights enable HVAC businesses to make more informed decisions about pricing strategies and resource allocation.

The software also addresses the growing demand for digital payment options among consumers. By offering multiple payment methods including credit cards, debit cards, and ACH transfers, contractors can accommodate client preferences while reducing the time between service delivery and payment receipt. This capability has become increasingly important as studies show that businesses offering digital payment options typically receive payments 15 to 30 days faster than those relying on traditional paper checks.

The platform serves contractors across multiple trades including electrical, plumbing, landscaping, and home services, though its recent enhancements focus specifically on meeting HVAC industry requirements. These specialized features include support for maintenance contracts, seasonal service scheduling, and equipment warranty tracking.

Project 2 Payment operates from St. Paul Park, Minnesota, and has built its reputation on providing practical solutions that address real-world challenges faced by contractors. The company offers comprehensive onboarding support and maintains a business resource center with educational materials designed to help contractors optimize their operations. The software is available through a subscription model with a 30-day trial period, allowing contractors to evaluate the platform's impact on their billing processes before committing to a long-term arrangement.
