

Premier Lighting & Home Automation Reports Surge in Lutron Smart System Installations Across Dallas-Fort Worth

June 30, 2026

PLANO, TX - June 30, 2026 -

Premier Lighting & Home Automation, a leading smart home systems integrator serving the Dallas-Fort Worth metroplex, reports significant growth in demand for Lutron lighting control and motorized shade installations throughout residential and commercial properties in the region. The company attributes this increase to growing awareness of energy efficiency benefits and the recent adoption of IECC 2021 building codes for commercial construction in Texas.

The Plano-based company has experienced heightened interest in comprehensive smart lighting solutions as property owners seek to reduce energy consumption while enhancing comfort and convenience. The trend spans both residential homeowners upgrading existing properties and commercial developers ensuring code compliance for new construction projects.

"The adoption of IECC 2021 for commercial construction has fundamentally changed how businesses

approach lighting design in Texas," said Terrell Ray, Principal at Premier Lighting & Home Automation in DFW. "These new requirements mandate occupancy sensing, daylight harvesting, and automatic load shedding for any permitted commercial renovation or new build. We design Lutron commercial lighting control systems with code compliance built in from the specification phase, working directly with general contractors, architects, and electrical engineers throughout the entire process."

The International Energy Conservation Code 2021 standards, now enforced across Texas, require sophisticated lighting control capabilities that traditional systems cannot provide. These regulations have accelerated the adoption of smart lighting technologies in commercial spaces, while simultaneously driving residential interest as homeowners observe the benefits in their workplaces.

Beyond code compliance, the company notes that clients increasingly recognize the long-term value of integrated lighting control systems. Lutron systems, which the company specializes in installing, offer remote management capabilities, scheduling features, and integration with other smart home technologies including motorized shades, multi-zone audio systems, and home theater setups.

"Homeowners are discovering that smart lighting control goes far beyond simple convenience," added Ray. "When properly designed and installed, these systems can reduce lighting energy consumption by up to 60 percent while creating customized lighting scenes for every activity and time of day. The integration with motorized shades provides additional energy savings through automated daylight management."

The company's service portfolio encompasses residential and commercial installations, including lighting design, control system programming, motorized shade installation, and whole-home automation. Their expertise extends to retrofitting existing homes with smart capabilities, as well as working with new construction projects from the initial specification phase through final commissioning.

Premier Lighting & Home Automation maintains an A+ rating with the Better Business Bureau and serves the entire Dallas-Fort Worth metropolitan area. The company specializes in Lutron lighting control systems, motorized shading solutions, home theater setup, wifi networking infrastructure, and comprehensive smart home automation. Their commercial division focuses on helping businesses meet new energy code requirements while creating productive, comfortable work environments through intelligent lighting and shade control.
