

Specialty Metals And Alloys Company Launches New Website

July 27, 2016

July 27, 2016 - PRESSADVANTAGE -

Elgiloy Specialty Metals, a business in Elgin, IL, is proud to announce that they have launched their brand new website. ?Elgiloy? is a mixture of the town in which they are located and the alloy materials they deal in. Their products are used in a range of different industries including medical device manufacturers, chemical processing, the oil and gas industry, and the aerospace industry. The new website is fully reflective of the important and diverse work that the company does. People are encouraged to learn more about the company [here](#).

Doloris Wood from Elgiloy Specialty Metals says: "We are extremely pleased with our new website. We can't thank our design team enough for not just listening to our brief, but actually improving on it. Having been in business for many years, establishing ourselves as a go to source for nickel, cobalt and titanium alloys, we wanted to create a website that was reflective of this and we believe that this has been properly achieved."

The company is known for their high quality products, including the 718 Inconel Alloy. Their inventory includes over 40 different high-performance and high-quality alloy products. Their customer base is global, and the list of industries that they serve is almost endless. Their new website highlights all of this in a clear,

easy to understand manner. Having been in business for a long time, they felt that the time was right to focus on a comprehensive internet marketing strategy to further expand their reach.

"We have been working for a long time and have built a solid customer base and excellent reputation," adds Doloris Wood. "However, to remain relevant in the 21st century, an internet marketing strategy is required. We really couldn't be happier with the results as we are already seeing the benefits from working with Jason Hall and the MyLocalSeos team."

People are also encouraged to like their Facebook page. This is used to keep clients up to date with industry relevant news and other pieces of information. Additionally, it enables people to communicate directly with Elgiloy Specialty Metals about the products they make and how they can be used.

Elgiloy Specialty Metal

Elgiloy Specialty Metals began as The Elgin National Watch Comp, which made a material for watch springs that doesn't corrode. The material is now used in aerospace and petrochemical areas and more. Now, they produce over 40 high-performance alloys.
