

All Pro Thornton Deck Builders Expands Pergola and Shade Services

August 05, 2026

THORNTON, CO - August 05, 2026 -

All Pro Thornton Deck Builders, a residential construction contractor serving the north Denver metropolitan area, has expanded its outdoor living division to include dedicated design and installation of shade structures and pergolas across Adams County and surrounding communities. The expansion responds to rising homeowner demand for permanent shade solutions and covered outdoor seating areas ahead of the summer construction season.

The expanded service line covers freestanding and attached pergolas, louvered roof systems, gazebos, and integrated shade sails, with construction options ranging from cedar and pressure-treated lumber to powder-coated aluminum and composite materials. Homeowners in Thornton, Northglenn, Broomfield, and Westminster can now schedule consultations directly for structures designed to withstand Front Range wind loads and snow accumulation typical of the region.

Colorado's high-altitude climate presents specific engineering challenges that shaped the new offerings.

Ultraviolet exposure along the Front Range degrades untreated wood at a faster rate than at lower elevations, snow loads in Adams County commonly require structural framing rated for thirty pounds per square foot or higher, and downslope wind events can exceed sixty miles per hour during winter months. Each of the new structures is engineered with those conditions in mind, and lumber is finished with penetrating stains rated for high ultraviolet exposure.

Demand for outdoor shade construction has climbed across the Front Range over recent years, driven by longer summer heat cycles and homeowners investing in usable backyard space. Industry observers have noted a broader national trend toward permanent outdoor structures, with pergolas frequently cited among the categories seeing sustained residential growth in the aftermath of pandemic-era home improvement spending.

Each project begins with a site evaluation covering sun orientation, existing deck integration, drainage, and municipal code compliance. All Pro Thornton Deck Builders handles permitting through the City of Thornton and neighboring jurisdictions, and construction crews carry general liability coverage along with workers compensation insurance for every job site.

"The expansion reflects a clear shift in how homeowners along the Front Range use their yards," said David Miller, owner of All Pro Thornton Deck Builders. "Shaded outdoor rooms have become a functional part of the home rather than a seasonal add-on, and the company built the new service line to meet that expectation with structures engineered for local weather conditions."

Projects typically move from consultation to installation within four to eight weeks, depending on material selection and permit review timelines. The company offers three-dimensional design renderings prior to construction, allowing homeowners to review dimensions, roof pitch, post placement, and finish options before any framing begins on site.

Attached pergolas typically extend from an existing home's exterior wall or an existing deck ledger board, sharing structural load with the residence. Freestanding structures require independent post footings excavated below the local frost line, which sits at roughly thirty-six inches in most of Adams County, and set in concrete piers. Attached construction generally involves less material and a shorter installation window, while freestanding designs offer greater placement flexibility across a yard.

Louvered roof systems, one of the more technically involved additions to the service line, allow rotating aluminum slats controlled by a wall-mounted switch or remote, closing to shed rain and opening to admit direct sunlight. Standard pergola configurations range from ten-by-ten feet for smaller patios to twenty-by-twenty for larger entertaining areas, with custom dimensions available when the site requires it.

Standard warranties cover workmanship for one year and structural framing for five years, with manufacturer warranties passed through on louvered roof mechanisms and composite materials. Optional add-ons include integrated lighting, ceiling fans, retractable canopies, and privacy screening built into pergola posts, each configured to match the primary structure and any adjacent deck surface.

The new service line joins an existing portfolio of custom deck construction, deck restoration, railing installation, and outdoor kitchen framing that All Pro Thornton Deck Builders has offered to Colorado homeowners for more than a decade. Consultations are scheduled by appointment, and preliminary design work is completed before any construction estimate is issued.
