

# **24 Hour Dumpster Announces Guidelines for Proper Dumpster Rental Use in Indianapolis**

*July 10, 2026*

COLUMBUS, IN - July 10, 2026 -

24 Hour Dumpster, a family-owned waste management company serving Southern Indiana, announced today comprehensive guidelines to help residents and contractors understand proper disposal practices for roll-off containers. The announcement comes as the company continues to see increased demand for roll off dumpster service Indianapolis IN during peak construction and renovation seasons.

The guidelines clarify which materials can be safely disposed of in rental dumpsters and which items require alternative disposal methods, addressing common questions the company receives from customers throughout Marion County and surrounding areas.

"Understanding what can and cannot go into a dumpster is essential for safe, legal, and environmentally responsible waste disposal," said Mark Finnerty, Operations Manager at 24 Hour Dumpster. "These guidelines help our customers avoid potential fines, environmental hazards, and disposal facility rejections while ensuring their projects stay on schedule."

Accepted materials for disposal include construction and demolition debris, household garbage and general

waste, furniture and mattresses, appliances such as refrigerators and washing machines, electronic waste including televisions and computers, hot tubs and spas, roofing materials and shingles, flooring and carpeting, yard waste and landscaping debris, foreclosure and estate cleanout materials, and tires, though disposal fees may apply for certain items.

Prohibited items that cannot be placed in roll-off containers include hazardous materials such as paint, chemicals, and oil, liquids of any kind, batteries and automotive fluids, propane tanks and gas cylinders, asbestos materials, medical waste and pharmaceuticals, radioactive materials, flammable or explosive substances, and pesticides and herbicides.

The company works with certified disposal facilities throughout Southern Indiana to ensure all accepted materials are processed according to environmental regulations and local guidelines. This partnership network allows the company to handle diverse waste streams while maintaining compliance with state and federal disposal requirements.

"Proper waste segregation protects both the environment and our communities," added Finnerty. "When customers follow these guidelines, they help prevent contamination at disposal facilities and ensure recyclable materials can be properly processed and diverted from landfills."

The company offers 10-yard, 15-yard, and 20-yard dumpster sizes suitable for projects ranging from small home cleanouts to large construction undertakings. Each rental includes up to two tons of waste disposal, protective rubber mats to prevent property damage, professional placement by experienced local drivers, and flexible three or seven-night rental periods.

Customers with questions about specific items or disposal requirements can contact the company directly for guidance. The company's experienced team can provide recommendations for alternative disposal methods when items fall outside standard acceptance guidelines.

24 Hour Dumpster serves Indianapolis and Marion County, including neighborhoods such as Broad Ripple, Fountain Square, and Irvington, as well as Columbus, Franklin, Seymour, Greenwood, Center Grove, and surrounding Southern Indiana communities. The company specializes in waste management solutions for construction projects, home renovations, estate cleanouts, disaster recovery, and special events, maintaining a commitment to environmental responsibility and transparent pricing throughout its service area.
