Secure Halo? Announces Cyber Risk Control Service for Summer 2026

July 06, 2026

SILVER SPRING, MD - July 06, 2026 -

Secure Halo?, a cybersecurity advisory firm and Mission Critical Partners company, has announced plans to launch Cyber Risk Control, a new recurring service designed to shift enterprise cybersecurity away from periodic risk assessments and toward continuous, operationalized risk oversight. The service is slated to become available to clients in the July of 2026.

Cyber Risk Control is structured as a monthly engagement that provides organizations with ongoing risk reporting, real-time dashboards, and proactive guidance aligned to their operational and security objectives. The announcement marks a significant expansion of Secure Halo?'s service portfolio, which currently includes virtual CISO services, penetration testing, managed detection and response, and third-party risk management.

The distinction Secure Halo? draws with Cyber Risk Control is one of timing and posture. Traditional risk management frameworks tend to produce findings on a quarterly or annual basis, often leaving organizations with outdated threat pictures for extended stretches of time. Cyber Risk Control is built to address that gap by surfacing risk intelligence on a monthly cadence, giving organizational leadership a current and actionable

view of where exposures exist and how they are trending over time.

"Organizations today are operating in an environment where the threat landscape can shift significantly within a matter of weeks," said Matt Yates, Director of Operations at Secure Halo?. "The traditional approach to risk management was never designed for that pace. Cyber Risk Control gives our clients a continuous operational picture rather than a periodic snapshot, which is a meaningful difference when it comes to making informed security decisions."

The service is designed to support a range of industries that Secure Halo? currently serves, including finance, healthcare, manufacturing, government, and utilities, sectors where regulatory pressure and threat exposure often demand a higher frequency of oversight than legacy risk frameworks provide.

Central to the Cyber Risk Control offering is a dashboard infrastructure that aggregates risk indicators and presents them in a format accessible to both technical teams and executive stakeholders. Monthly reports accompanying the dashboards will be structured to map risk posture against organizational objectives, allowing leadership to connect security data to broader business continuity considerations rather than treating it as a standalone IT concern.

The July 2026 target window gives the firm time to onboard initial clients in a structured manner ahead of a broader rollout. Secure Halo? has indicated that organizations in regulated industries with existing compliance obligations are expected to represent a significant portion of early adopters, given the degree to which those sectors already carry formal risk reporting requirements.

The proactive nature of the service reflects a broader philosophy Secure Halo? has maintained across its advisory work. The firm has long positioned itself as a partner in building long-term security maturity rather than a vendor responding to incidents after they occur. Cyber Risk Control formalizes that philosophy into a structured, recurring engagement model intended to give clients sustained visibility rather than isolated assessments.

Organizations seeking to learn more or to be considered for early access can visit Secure Halo?'s website or contact the firm's sales team directly.

Secure Halo? operates out of Silver Spring, Maryland, as part of the Mission Critical Partners family of companies. The firm serves national and international clients across both the public and private sectors. Additional information about the firm's cybersecurity services is available at securehalo.com.
