

fassadenmax GmbH Expands Facade Cleaning Services Across Zurich Region with Advanced Drone Technology

August 13, 2026

NIEDERHASLI, ZH - August 13, 2026 -

fassadenmax GmbH, a specialist in scaffold-free facade cleaning services based in Niederhasli, has expanded its operations throughout the Zurich region using innovative drone and telescopic lance technology to address the growing demand for sustainable building maintenance solutions.

The company, established in May 2024, has positioned itself as a regional provider of professional cleaning services for facades, roofs, and solar installations across German-speaking Switzerland. Operating from its Niederhasli headquarters at Gewerbestrasse 18, the firm serves commercial and residential properties throughout Kanton Zürich without requiring traditional scaffolding infrastructure.

The expansion comes as property owners in the Zurich area increasingly seek cost-effective alternatives to facade repainting and conventional cleaning methods. Research indicates that approximately 90 percent of facade contamination consists of biological growth including algae, fungi, and moss, which can be effectively

removed through specialized cleaning techniques rather than expensive repainting projects.

The adoption of drone technology and telescopic systems, the company says, allows cleaners to access every corner of a building facade without the disruption and expense of scaffolding,. The company also adds that this approach not only reduces costs for property owners but also minimizes the environmental impact of building maintenance by extending the life of existing facade materials.

The company employs a systematic three-step cleaning process that includes pre-treatment of affected surfaces, gentle low-pressure rinsing, and application of long-term protective sealants. This methodology works effectively on various substrates including plaster, fiber cement, stone, metal, glass, and roof tiles commonly found on buildings throughout the Zurich metropolitan area.

For photovoltaic panel cleaning, the service addresses a critical maintenance need as dirty solar panels can experience significant efficiency losses. Regular professional cleaning helps maintain optimal energy production levels, particularly important as Switzerland continues to expand its renewable energy infrastructure.

The scaffold-free facade cleaning approach offers several advantages for urban environments like Zurich, where traditional scaffolding can disrupt pedestrian traffic and require lengthy permit processes. The drone and telescopic technology enables cleaning teams to complete projects more quickly while maintaining high safety standards.

Algae removal Zurich property owners face is particularly challenging due to the region's climate conditions, which promote biological growth on building exteriors. The company's long-term protection treatments can prevent regrowth for several years, reducing the frequency of required maintenance.

The company focuses on not only providing measurable results that extend beyond aesthetic improvements, but also to help preserve building materials, improve energy efficiency for solar installations, and reduce the overall environmental footprint of property maintenance.

The company offers free test area assessments for property owners considering professional facade cleaning services. Interested parties can contact fassadenmax GmbH at 0840 880 880 or locate the company on Google Maps for consultation scheduling.

fassadenmax GmbH operates Monday through Friday from 08:00 to 12:00 and 13:00 to 17:00, serving the greater Zurich area and German-speaking Switzerland with professional facade, roof, and solar panel

cleaning services.
