

Bow Tie Solutions Expands Services with Custom Gate Installation & Repair Division

July 15, 2026

PEA RIDGE, AR - July 15, 2026 -

Bow Tie Solutions, the Pea Ridge-based electrical contracting company, has expanded its service offerings to include comprehensive gate installation and repair services for residential and commercial properties throughout Northwest Arkansas. The expansion enables the company to provide complete gate solutions from design through installation, leveraging its existing electrical expertise to offer integrated automation and control systems.

The new division represents a natural extension of the company's electrical contracting services, allowing property owners to work with a single licensed and insured team for all aspects of their gate projects. The service encompasses design consultation, metal fabrication, installation, electrical wiring, and ongoing maintenance without the need for multiple subcontractors.

"Adding gate installation and repair to our service portfolio allows us to deliver complete perimeter security solutions that our clients have been requesting," said Bill Towler, spokesperson for Bow Tie Solutions. "Our

electrical background gives us a unique advantage in installing and maintaining automated gate systems, from basic motor installations to advanced smart gate technologies with integrated access control."

Bowtie Solutions Custom Gate Installation services cover a comprehensive range of gate types including swing gates, slide gates, rolling gates, chain link, ornamental iron, wood, vinyl, and steel configurations. The company's electrical expertise enables them to handle all automation aspects including gate motor installation, low-voltage control wiring, gate control panel wiring, solar gate openers, smart gate systems, keypad entry, remote gate openers, safety sensors, and loop detectors.

The repair division addresses common gate issues that property owners face, offering motor replacement, actuator replacement, hinge repair, post repair, and gate alignment services. Emergency repair services are available for gates that become stuck open or closed, or have come off their tracks, ensuring that security and access concerns are addressed promptly.

Recognizing that regular maintenance extends gate system lifespan and prevents costly breakdowns, Bowtie Solutions has developed preventative maintenance plans tailored to different gate types and usage patterns. These plans include regular inspections, lubrication, adjustment of safety sensors, and testing of electrical components to ensure reliable operation year-round.

The company offers free on-site consultations for new gate projects, during which their team assesses the property, discusses design options, and provides detailed project estimates. This consultative approach ensures that clients receive gate solutions that meet their specific security, aesthetic, and budgetary requirements.

Bow Tie Solutions brings over 40 years of experience in electrical contracting to this new service division. The company serves Benton County, Madison County, and Washington County, providing electrical installation, generator maintenance and installation, metal fabrication, portable welding, and welding services. Their established reputation for quality workmanship and customer service in the electrical industry positions them to deliver the same level of excellence in gate installation and repair services.
