

Bullysticks Organic Launches New Deer Antlers For Dogs

May 12, 2016

May 12, 2016 - PRESSADVANTAGE -

Bullysticks Organic, a pet care company in North Port, FL, has announced that they have recently launched their deer antlers for dogs although it is currently unavailable. The company indicated that the product will soon be available for purchase through the company's Amazon store within a couple of weeks. As with all Bullysticks Organic products, the deer antlers are 100% organic and they are designed to enhance the overall health and happiness of a dog.

Victor Melo from Bullysticks Organic says: "People who own dogs love them like they are part of the family, which they are. As with any member of the family, you only want the best of the best for them, and this is what we aim to offer. Our new deer antlers are fully organic so they won't harm your dog's health. Additionally, they help keep their teeth and gums strong and provide them with much needed entertainment."

The antlers have been designed with dog oral care in mind. They help to clean their teeth, thereby also preventing the build up of tartar. By ensuring a dog has good oral health, they can also avoid bad breath. Furthermore, it cleans the teeth and gums, leaving them healthy and strong.

Deer antlers are also a natural source of various essential minerals. The company has designed them to be a holistic and nutritious treat. It contains zinc, manganese, phosphorous, and calcium. All of these minerals are essential to the overall health of a dog.

"As with all our dog products, the deer antlers are free from chemicals, hypoallergenic, and safe," adds Victor Melo. "They are made from 100% naturally shed elk antlers. This means they do not contain any additives or artificial ingredients. They are safe for all types and breeds of dogs, regardless of their age or size."

Elk antlers are very long lasting, particularly compared to other dog bones. This means that they are much more durable and will keep a dog happy and busy, because they can chew longer. While the antlers are suitable for all dogs, they are particularly for those who chew a lot. Because the antlers are naturally shed, each has a unique shape, length, and size. They are free from odor and residue as well.
