

HRT Mobile Welding Highlights Metal Fabrication Experience Serving Livermore and Port of Oakland

August 14, 2026

LIVERMORE, CA - August 14, 2026 -

HRT Mobile Welding, a full-service metal fabrication shop and mobile welding company based in Livermore, California, has completed structural and specialty welding projects for a range of industrial clients, including work performed for the Port of Oakland. The company is drawing attention to that project experience as a way to illustrate the scope of work handled by a combined shop-and-mobile fabrication operation.

Owned and operated by welder Kyle Shannon under California State License Board license number 1132921, the company pairs in-house metal and structural steel fabrication with a mobile welding fleet that travels to industrial, commercial, and residential job sites. That fleet serves Livermore, the greater Tri-Valley, and the East Bay, allowing repairs and installations to take place directly at a client site when moving heavy or fixed components to a shop is impractical.

The Port of Oakland project reflects a category of work common to full-service fabrication shops, where structural components must meet demanding specifications and tight coordination with other contractors. Facilities of that scale often require both fabricated steel produced in a controlled shop environment and field welding carried out on location, a combination that mobile welding operations are positioned to provide.

"Work at a facility like the Port of Oakland shows how shop fabrication and on-site welding fit together on a single project," said Kyle Shannon, owner of HRT Mobile Welding. "Some steel is best built in the shop where conditions are controlled, and other work has to happen in the field because the equipment cannot move. Handling both sides keeps a project moving."

Beyond structural fabrication, the company performs specialty welding repair, heavy equipment welding, bucket repair and hard facing, pin and sleeve machining, line boring, and trailer repair. Those services address the maintenance needs of contractors and equipment operators who depend on machinery remaining in service, particularly when downtime affects a broader schedule.

Contractors sourcing structural steel work often weigh whether a project is better suited to shop fabrication or on-site welding, and the distinction typically depends on the size of the components, site access, and the sequence of construction. HRT Mobile Welding metal fabrication capabilities are intended to cover both scenarios, with fabricated assemblies produced at the Livermore shop and mobile crews dispatched when field work is required.

"The question of shop versus field is one contractors face constantly," Shannon said. "The answer usually comes down to logistics and timing rather than a single rule, and it helps to have both options available under one operation."

HRT Mobile Welding operates from Livermore, California, and maintains additional project information at hrtmobilewelding.com. The company serves clients across the Tri-Valley and East Bay regions with structural fabrication and mobile welding services.

HRT Mobile Welding is a full-service metal fabrication shop and mobile welding company led by owner and welder Kyle Shannon. Combining in-house structural steel fabrication with a mobile welding fleet, the company provides structural fabrication, specialty welding repair, heavy equipment welding, line boring, pin and sleeve machining, and related services to industrial, commercial, and residential clients throughout Livermore, the Tri-Valley, and the East Bay.
