

Aloha Pavers & Concrete Expands Hardscaping Services to Meet Growing Demand for Outdoor Living Spaces

July 17, 2026

OREM, UT - July 17, 2026 -

Aloha Pavers & Concrete, a certified hardscaping specialist serving Utah County, Salt Lake County, and Wasatch County, announces expanded capacity to meet increasing homeowner demand for durable outdoor surface solutions. The company specializes in paver patios, concrete work, driveways, retaining walls, and comprehensive outdoor living space installations designed to enhance both property functionality and value.

The expansion comes as Utah County homeowners increasingly seek professional hardscaping solutions to address common challenges including cracked driveways, poor drainage, underutilized yard spaces, and deteriorating concrete surfaces. The company's comprehensive approach combines structural engineering expertise with aesthetic design to create outdoor environments that withstand Utah's variable climate conditions while maximizing usable living space.

"Homeowners throughout Orem and surrounding Utah County communities are discovering that professional

hardscaping provides both immediate lifestyle improvements and long-term property value increases," said Nate Chandler, owner and founder of Aloha Pavers & Concrete. "Whether addressing a failing driveway, creating an outdoor entertainment area, or solving drainage issues with properly engineered retaining walls, each project represents an investment in both the home's functionality and its market appeal."

The company's service portfolio encompasses nine specialized hardscaping categories. Driveway installations utilize either interlocking pavers that flex with ground movement or custom concrete with various finish options. Paver patio installations feature custom borders, inlays, and patterns that transform backyards into entertainment destinations. Concrete flatwork services address needs ranging from RV pads to utility paths, with proper base compaction ensuring minimal settling.

Retaining wall installations prevent erosion while creating usable flat tiers in sloped yards, adhering to strict engineering standards. Outdoor kitchen construction includes custom grill islands, bar seating, and prep stations that eliminate constant trips between indoor and outdoor cooking spaces. Fire pit installations extend patio seasons into late autumn while creating natural gathering points. Landing steps provide safe navigation of elevation changes, while walkout basement transformations convert dark exits into inviting sunken patios. Wall seating maximizes space by incorporating functional furniture directly into hardscape structures.

As a certified installer for manufacturers including Belgard, Techo-Bloc, and Unilock, the company maintains industry-leading quality standards across all installations. Each project begins with comprehensive site evaluation to address specific challenges such as drainage patterns, soil conditions, and load-bearing requirements. This technical expertise proves particularly valuable for commercial clients requiring parking lots, entryways, and loading zones that meet specific traffic flow and safety regulations.

"The difference between professional hardscaping and standard concrete work lies in the engineering details that ensure decades of performance," added Chandler. "From proper base preparation to precision grading for water management, these technical elements determine whether a hardscape investment enhances property value or becomes a maintenance burden."

Based in Orem, Aloha Pavers & Concrete serves residential and commercial clients throughout Utah County, including American Fork, Lehi, Lindon, Mapleton, Pleasant Grove, Provo, Springville, and Vineyard. The company offers flexible financing plans tailored for major hardscape projects and provides detailed project scopes.
