

Alpha Plumbing, Heating & Cooling Now Offers High-Efficiency Combi Tankless Boiler Installations

July 17, 2026

BLOOMINGTON, MN - July 17, 2026 -

Alpha Plumbing, Heating & Cooling has expanded its heating services to include installations of high-efficiency combi tankless boilers for homeowners in the Twin Cities area. The addition responds to demand for systems that combine space heating and domestic hot water production in a single unit. These boilers operate without a traditional storage tank, providing on-demand hot water while supporting radiant floor heating, baseboards, or other hydronic systems common in Minnesota homes.

Combi tankless boilers deliver heated water directly when needed for both faucets and heating distribution. This design eliminates the energy used to maintain a large volume of stored hot water, which can contribute to lower utility consumption during periods of varying demand. In colder climates like the Twin Cities, where winters require consistent heating, the systems adjust output based on real-time needs for space warmth and household water use.

Plumbing services in Bloomington, MN, integrate with these boiler installations through proper piping connections, gas line integration, and system testing. Technicians handle the full process, including removal of older equipment when applicable and configuration of new units to meet local code requirements. The

work aligns with the company's existing capabilities in boiler services, water heater installations, and gas system management.

Heating services encompass furnace repairs, air conditioning maintenance, and now expanded boiler options. Technicians diagnose issues and complete most repairs during the initial visit when parts are available. Free estimates support planning for new heating and cooling system projects, including combi boiler installations.

A one-year warranty covers parts and labor on completed installations and repairs. The company follows an upfront pricing approach, providing detailed quotes before work begins.

Customer reviews describe experiences with related heating and plumbing work. One account from recent months noted a thorough heating system inspection with explanations of components and functions. Another mentioned a water heater replacement combined with kitchen plumbing adjustments, highlighting clear communication and part quality. Feedback has also referenced responsive scheduling for maintenance calls.

Alpha Plumbing, Heating & Cooling serves the Twin Cities metropolitan area, including St. Paul, Minneapolis, Woodbury, Plymouth, Eden Prairie, White Bear Lake, Stillwater, Edina, Brooklyn Park, Burnsville, Eagan, Apple Valley, Fridley, Coon Rapids, Roseville, Lakeville, Minnetonka, Shakopee, Anoka, and Bloomington.

"High-efficiency combi tankless boilers offer homeowners an option for integrated heating and hot water in one compact unit," said Chad Olson, Plumber at Alpha Plumbing, Heating & Cooling. "Installations involve careful integration with existing home systems to support both comfort and daily water needs."

"These units can adapt to fluctuating demands throughout the day and across seasons," continued Olson. "Proper setup ensures reliable performance in Minnesota's variable climate."

The company operates as a locally owned and independent business. This structure supports technician training across plumbing, heating, cooling, gas, and drain services. The addition of high-efficiency combi tankless boiler installations provides another choice for homeowners considering upgrades to aging heating equipment or seeking systems that address both space heating and hot water requirements.

In regions with hard water or specific mineral content, technicians can incorporate compatible water treatment options during installation. Regular maintenance, available through standard service or membership programs, helps sustain system efficiency over time. The company continues to offer a full range of residential solutions, including fixture installations, leak repairs, drain cleaning, sewer inspections, and emergency responses.

Alpha Plumbing, Heating & Cooling delivers these services to support home infrastructure in the local area. The new combi tankless boiler installations address combined needs for heating and hot water in a single high-efficiency appliance.
