

Fractus Learning Announces 15 Years of Growth in Educational Media

July 20, 2026

Oconomowoc, Wisconsin - July 20, 2026 -

Fractus Learning, an education technology and family resource publisher, announced this month that it has reached its fifteenth year of operation. The milestone marks a decade and a half of producing classroom guidance, teaching resources, and product reviews for educators and parents across the United States and abroad.

Founded in 2011, Fractus Learning began as a platform focused on how emerging technology could improve the learning experience and support pedagogical outcomes in schools. Over fifteen years, the publication has expanded its coverage to include classroom instruction strategies, printable teaching materials, parenting guidance, and independent reviews of educational tools and toys.

The publication reports that its work has been referenced by educators at more than sixty colleges, universities, and school districts around the world. Its resource library now includes widely used materials such as end-of-year report card comment guides, Bloom's Taxonomy verb charts, classroom bulletin board ideas, and reviews of instructional hardware including projectors, document cameras, and student microscopes.

"Reaching fifteen years is a reflection of the trust educators and parents have placed in this publication," said Bryan Bigari, Editor at Fractus Learning. "When the site began, the central question was how technology could make learning more effective and more joyful. That question still guides the work today, even as the tools and the classrooms around it continue to change."

The anniversary arrives during a period of significant change in the education technology sector. Schools and families have adopted a broad range of digital learning tools in recent years, from classroom management software to adaptive learning platforms and connected devices. Fractus Learning has documented many of these shifts through its educator-focused coverage and its reviews of hardware and instructional resources.

Throughout its history, the publication has maintained a dual focus on both professional educators and parents supporting learning at home. Its "Parent's Corner" and "Educators" sections address distinct audiences, offering pedagogical resources for the classroom alongside guidance on child development, play, and enrichment activities. This combined approach reflects the publication's stated mission of helping teachers and parents raise well-rounded students.

The company noted that its contributor base is composed of writers with backgrounds in education and technology. Their work has been featured across a range of education and parenting outlets, and the publication attributes much of its longevity to the practical, classroom-tested nature of its content.

Product review coverage has become a substantial part of the publication's output over the years. Editorial teams evaluate categories that include STEM subscription kits, robot-building sets, telescopes, classroom projectors, and charging solutions for tablet-based learning programs. These reviews are intended to help educators and parents make informed decisions when selecting educational products and instructional technology.

"The education landscape looks very different than it did fifteen years ago, and the pace of change has only increased," Bigari said. "Our aim is to keep providing clear, useful information that helps teachers in the classroom and parents at home make sense of the tools available to them. That focus has not changed since the beginning."

The fifteen-year milestone also reflects broader trends in digital publishing for the education market. As instructional technology has grown more central to schools, demand for independent evaluation and practical classroom guidance has expanded alongside it. Fractus Learning positions its coverage at the intersection of these needs, serving both instructional professionals and the families who support learning outside of school hours.

Looking ahead, the publication indicated that it intends to continue expanding its resource library and product review coverage while maintaining its foundational emphasis on how technology can strengthen teaching and learning. The company said its editorial priorities will remain centered on accuracy, classroom relevance, and the practical needs of its readers.

Fractus Learning operates as a publication of Peninsula Industries Inc. The publication maintains active channels across major social platforms, where it shares teaching resources, product guidance, and updates for its community of educators and parents.

Fractus Learning works with educators around the globe to promote technology skills, tools, and resources, with a focus on how technology can improve the learning experience and pedagogical outcomes. For more information, visit www.fractuslearning.com.
