

Holton Electric Enhances Industrial Electrical Services for Minnesota Manufacturing Facilities

July 24, 2026

Saint Paul, Minnesota - July 24, 2026 -

Holton Electric, a commercial electrical contractor in Minnesota, is expanding its support for manufacturing facilities through specialized industrial electrical services. This initiative addresses the unique demands of production environments where reliable power systems are essential for maintaining productivity and operational continuity.

Manufacturing operations require electrical infrastructure capable of supporting heavy machinery, automated systems, and complex production lines. Holton Electric provides comprehensive solutions including production line modifications, equipment installations, power system upgrades, and integration of automated standby power setups. These services help facilities adapt to changing production needs while ensuring compliance with safety standards and minimizing downtime.

The company works closely with manufacturing clients to implement modifications that enhance efficiency. This includes upgrading electrical distribution to accommodate new equipment, installing capacitor banks to reduce energy demand charges, and optimizing power delivery for robotics and automation technologies. Such projects often involve careful coordination to avoid interrupting ongoing operations, with teams

executing work during scheduled maintenance windows or off-peak hours.

In addition to new installations and modifications, Holton Electric offers general service and maintenance tailored to industrial settings. Technicians perform troubleshooting, panel upgrades, and system optimizations that support consistent performance across warehouses, production floors, and support facilities. Standby generator installations provide critical backup power, protecting against outages that could halt manufacturing processes and result in significant financial losses.

Safety remains a priority in industrial environments. The company conducts arc flash assessments and utilizes thermal infrared imaging to identify potential hazards in high-load systems. These diagnostic tools enable proactive interventions, helping facilities maintain compliance and protect personnel working near electrical equipment.

Ted LaFrance, owner of Holton Electric, said industrial clients benefit from electrical partners who understand the pace and precision required in manufacturing. "Our team focuses on delivering solutions that integrate seamlessly with production goals, providing reliable infrastructure that supports efficiency and growth."

LaFrance added that collaboration with facility managers allows for customized approaches that address specific challenges. "By treating each project as an extension of the client's operations, we ensure electrical work contributes directly to overall success without unnecessary disruptions."

Founded in 2007, Holton Electric strengthened its capabilities through integration with A-1 Electric Service in 2020, incorporating decades of experience from the Waconia area. This locally team-operated company serves the Twin Cities metro region and surrounding areas as a trusted provider of commercial and light industrial electrical contracting services.

Client testimonials highlight the team's knowledge, respect for operations, and commitment to quality workmanship. Reviews frequently note the ability to accommodate urgent needs, thorough communication, and solutions that avoid shortcuts while delivering lasting results.

Holton Electric's industrial services complement its broader offerings for commercial clients, including educational institutions, restaurants, and multi-family properties. The full spectrum includes new construction electrical work, renovations, energy-efficient lighting, data and communication systems, and 24/7 emergency response.

The company's approach emphasizes innovation through the adoption of current technology and best practices in electrical contracting. This enables support for evolving manufacturing processes that incorporate advanced automation and energy management strategies.

As Minnesota's manufacturing sector continues to play a vital role in the regional economy, Holton Electric remains committed to providing dependable electrical solutions. The firm's expertise helps facilities navigate challenges related to equipment modernization, energy efficiency, and operational reliability.

Through meticulous planning, skilled execution, and ongoing partnership, Holton Electric contributes to the success of industrial operations across the state. The company focuses on building long-term relationships that support sustained productivity and safety in demanding manufacturing environments.

Holton Electric is a commercial and light industrial electrical contracting company based in Minnesota. It provides professional electrical services to manufacturing facilities and other businesses and institutions throughout the region with an emphasis on workmanship, integrity, and client collaboration.
