

## **Squat Rack Adjustable Weights Set and Bench Announced For Sale For Fitness Enthusiasts by Strongway Gym Supplies**

*July 28, 2026*

Coventry, UK - July 28, 2026 -

Strongway Gym Supplies has announced the availability of additional adjustable weight benches designed to complement squat racks, free weights and other strength-training equipment used in home gyms. The latest announcement expands the company's bench range and forms part of ongoing updates across its residential fitness catalogue, where adaptable equipment continues to feature prominently in home workout environments.

Adjustable benches remain a central component of many strength-training spaces because they support a broad selection of exercises while requiring relatively little floor space. By allowing the backrest to be repositioned at different angles, a single bench can accommodate flat, incline and seated movements, reducing the need for separate pieces of equipment. This flexibility has made adjustable benches a common choice for both newly assembled home gyms and established workout areas undergoing expansion.

Strongway Gym Supplies stated that benches are frequently paired with squat racks, barbells and dumbbells to create versatile training stations capable of supporting varied exercise routines. Such arrangements allow compound lifts and accessory exercises to be performed within the same area, making efficient use of the available space while accommodating different styles of resistance training.

The various types of adjustable bench options, including those with squat racks or heavy-duty construction, are available to be explored at: <https://strongway.co.uk/collections/adjustable-bench>.

Home fitness spaces have become increasingly personalised as equipment is added over time to reflect changing training preferences. While some individuals begin with a basic bench and a pair of dumbbells, others gradually incorporate squat racks, cable systems, storage units and cardio machines. Equipment that remains compatible with future additions is often selected because it allows the training area to evolve without requiring extensive changes to its overall layout.

The benefits of structured exercise carried out at home have also been examined in academic research. A 2019 study titled "Effects of Home-Based Exercise Training Systems, Combined with Diet, on Cardiometabolic Health", published in the International Journal of Exercise Science and conducted in Los Angeles, USA, found that a 12-week home-based exercise programme combined with dietary control led to significant improvements in body weight, fat mass, blood pressure and aerobic fitness. Conducted by Roberts CK, Segovia DE, Lankford DE, and colleagues, the study highlighted the potential effectiveness of structured home-based training systems, when combined with diet, in improving key markers of cardiometabolic health. Equipment such as adjustable benches can form part of these structured home exercise systems by supporting a broad range of resistance exercises that can be incorporated into organised training programmes alongside other strength and conditioning equipment.

An adjustable bench can also support progressive strength programmes by providing stable positioning for a variety of upper and lower body exercises. Changing the bench angle alters movement patterns and muscle emphasis, enabling different exercises to be performed without introducing additional equipment. This adaptability has contributed to the continued popularity of adjustable benches within residential training spaces where versatility remains a priority.

The company noted that its broader product catalogue includes equipment intended to accommodate home gyms of different sizes, ranging from compact spare-room setups to larger garage training areas. Strength-training systems, Olympic barbells, weight plates, storage accessories and cardio machines form part of the wider collection alongside adjustable benches.

Those wishing to learn more about Strongway Gym Supplies and their extensive catalogue of home workout and cardio equipment can visit: <https://strongway.co.uk/>.

As home exercise spaces continue to mature, attention has increasingly shifted towards equipment capable of supporting long-term use rather than single-purpose training. Benches that can be used alongside free weights, squat racks and cable systems provide a foundation for varied workout routines while allowing additional equipment to be incorporated as training requirements develop.

The latest announcement reflects Strongway Gym Supplies' continuing efforts to maintain a broad selection of adaptable fitness equipment for residential exercise settings. By expanding the availability of adjustable benches compatible with squat racks and free-weight training, the company continues to support the development of organised home gyms designed to accommodate a wide variety of strength-training routines over the long term.

Additional information regarding squat rack bench has also been published in a previous article outlining the role of adjustable benches within home strength-training environments.
