

Girard Heating and Air Conditioning Showcases Mitsubishi Cold Climate Heat Pump Installation Expertise in Western Massachusetts

July 30, 2026

WESTFIELD, MA - July 30, 2026 -

Girard Heating and Air Conditioning, Inc. recently completed a comprehensive Mitsubishi Cold Climate Hyper Heat Pump installation for a residential property in North Adams, Massachusetts, demonstrating the growing adoption of energy-efficient heating solutions across Western Massachusetts. The project, documented through detailed case study materials and video documentation, highlights the technical expertise required to integrate advanced heat pump technology into existing homes while maximizing comfort and energy savings.

The North Adams installation involved two Mitsubishi Hyper Heat Multi-Zone Systems featuring both wall-mounted and floor-mounted indoor units, creating five independently controlled climate zones throughout the residence. The five-day project, completed near the Massachusetts College of Liberal Arts, required careful planning to conceal system piping within the home's existing structure while ensuring the indoor units complemented the interior design.

The Installation of Mitsubishi Cold Climate Hyper Heat Pumps North Adams MA project addressed the homeowner's goals of reducing fossil fuel dependence while maintaining reliable heating performance during extreme winter conditions. The Mitsubishi systems selected for this installation maintain heating efficiency even when outdoor temperatures drop well below freezing, a critical consideration for New England properties.

"The customer is now able to lower his carbon footprint by eliminating fossil fuels with an efficient Hyper Heat system and have five separate zones that can be set for customized comfort," stated the team at Girard Heating & Air Conditioning.

The multi-zone configuration allows the homeowner to direct heating and cooling energy to specific areas as needed, rather than conditioning the entire home simultaneously. This targeted approach to climate control significantly reduces energy consumption while providing personalized comfort settings for different living spaces.

Cold climate heat pumps represent a significant advancement in HVAC technology, particularly for regions experiencing harsh winters. These systems utilize advanced refrigerant technology and variable-speed compressors to extract heat from outdoor air even in sub-zero temperatures, delivering it efficiently indoors without the need for backup heating sources.

The North Adams installation includes comprehensive warranty protection, with a standard 2-year contractor warranty and 12-year manufacturer parts warranty. The extended parts coverage reflects Girard Heating and Air Conditioning's status as a Mitsubishi Diamond Elite Contractor, providing customers with additional peace of mind regarding their investment in sustainable heating technology.

The project also demonstrates the financial benefits available to Massachusetts property owners transitioning to heat pump technology. Through partnerships with Mass Save and other efficiency programs, homeowners can access substantial rebates that offset installation costs while reducing long-term operating expenses.

Girard Heating and Air Conditioning specializes in heat pump installations throughout Western Massachusetts, serving communities including Springfield, Westfield, Northampton, North Adams, Amherst, Pittsfield, and Great Barrington. As a Mitsubishi Diamond Contractor Elite and Mass Save Partner, the company maintains expertise in designing and implementing energy-efficient HVAC solutions for both residential and commercial properties. The company focuses on helping property owners transition from traditional fossil fuel systems to modern heat pump technology that provides year-round comfort while reducing environmental impact.
