

Denver Fence Guys Expands In-House Automated Gate and Access Control Program

July 27, 2026

COMMERCE CITY, CO - July 27, 2026 -

Denver Fence Guys, a family-owned fence and gate contractor based in Commerce City, Colorado, has consolidated its automated gate and access control work into a single in-house program serving residential and commercial properties across the Denver metropolitan area. By keeping design, fabrication, installation, and automation within its own team, the company completes entry systems without subcontracting the work to outside crews.

The move reflects growing demand for secure, automated entry across the north Denver metro. Handling each stage internally is intended to give clients a single point of accountability from the first consultation through the final installation, rather than coordinating separate vendors for gate construction and gate automation. The company reports that combining fabrication and automation under one team also shortens the handoffs that can slow a project when fencing, gate building, and operator installation are split among different trades.

"Keeping the whole process under one roof means the crew that designs a gate is accountable for how it operates on day one and years later," said Barrett Pribyl, owner of Denver Fence Guys. "That continuity is what clients remember."

The program covers the full scope of gate work, including consultation and design, fabrication or procurement, installation, automation, and safety-feature installation. Residential clients can select swing, slide, cantilever, pedestrian, and decorative gates, while commercial properties can add vertical pivot, barrier arm, rolling, chain link, and wire mesh configurations. Gates are built in steel, aluminum, wrought iron, wood, vinyl, chain link, or composite, allowing the company to match the material and style to the property and its security requirements.

For automation, the company installs slide and swing gate operators along with keypad entry, card readers,

and remote control systems that let property owners manage who passes through an entrance. Each automated gate is fitted with the safety features that stop a gate when an obstruction is detected, a step that matters most on commercial sites with steady vehicle and pedestrian traffic. These systems use manufacturer equipment from LiftMaster, Chamberlain, Linear, DoorKing, Viking Access Systems, Apollo, HySecurity, and FAAC.

"Access control is where a lot of the recent growth has been, both for businesses and for homeowners who want a managed entrance," said Barrett Pribyl, owner of Denver Fence Guys. "Building and automating the gate ourselves is what makes that reliable."

Alongside the gate program, Denver Fence Guys installs a full range of residential and commercial fencing, including security, privacy, agricultural, and pool fencing. Fence types span wood, composite, ornamental iron, chain link, vinyl, brick, and precast concrete. The company also installs Copper Wood, a naturally rot- and insect-resistant specialty wood it treats as a distinguishing material for property owners who want a natural look with reduced upkeep. Each installation includes site assessment, permit acquisition, site preparation, and excavation and post installation, and the company backs its fencing with a 10-year workmanship warranty and a 15-year warranty on wood posts.

Beyond installation, Denver Fence Guys provides fence repair and maintenance across its service area. Repair work includes inspection, component replacement, rust removal and treatment, and emergency repairs, while ongoing maintenance covers cleaning, staining and painting, sealing, vegetation trimming, and regular inspections that help property owners extend the life of a fence. The company also supplies fence materials directly, including cedar pickets, rails, and posts, Copper Wood and steel posts, and hardware such as latches, hinges, and handles, with delivery, installation assistance, and design consultation for customers managing their own projects.

Denver Fence Guys works with manufacturer brands including Master Halco, Bufftech, Trex Fencing, and Ameristar, and is a member of the American Fence Association. The company serves homeowners, homeowners associations, and businesses throughout the Denver metro from its base in Commerce City.

Founded in 2007 and led by owner Barrett Pribyl, Denver Fence Guys designs, fabricates, installs, and automates gates and installs access control systems in-house, alongside a full range of fencing for residential and commercial properties across the Denver metropolitan area. The company also provides fence repair, maintenance, and direct materials supply.
