

Seatylock Highlights In-House Bike Lock Production as Key to Quality and Innovation

July 30, 2026

Dover, Delaware - July 30, 2026 -
Seatylock, the premium mobility security brand founded in 2008, emphasizes its comprehensive in-house manufacturing approach as fundamental to delivering certified bike security products that combine protection with design excellence. The company designs, produces, and assembles each product internally, including cylinders and keys, maintaining complete control over quality standards and proprietary innovations.

This vertical integration approach distinguishes Seatylock in an industry where many manufacturers rely on outsourced components and generic lock mechanisms. By maintaining Seatylock in-house bike lock production capabilities, the company ensures consistency across its entire product ecosystem, which includes folding locks, U-locks, chain locks, seat-lock hybrids, detachable seats, and accessory protection systems.

"When you control every aspect of production, from initial design through final assembly, you can guarantee that each lock meets the exact specifications required for independent certification," said Michael

Shenkerman of Seatylock. "Our in-house approach allows us to rapidly implement improvements and protect our patented innovations while maintaining the highest quality standards that urban cyclists depend on."

The company's manufacturing philosophy extends beyond simple assembly. Seatylock produces its own cylinders and keys, components that represent critical security elements often outsourced by competitors. This level of control enables the brand to maintain numerous registered patents and implement innovative features across every product line.

Independent certification remains central to Seatylock's approach. The company's products undergo rigorous testing by organizations including Sold Secure (UK), ART (Netherlands), FUB (France), Varefakta (Denmark), SRA (France), and Velosure (Australia). These certifications validate the security standards achieved through the company's controlled manufacturing processes.

Seatylock quality-driven innovation manifests in products that have earned IF Design, Red Dot, and European Product Design Awards. The brand's commitment to treating locks as essential cycling components rather than afterthoughts drives continuous development across its product families, including the award-winning Foldylock series and the upcoming ULTRA line designed to resist angle-grinder attacks.

"Protection perfected by design requires more than just strong materials," added Shenkerman. "It demands complete oversight of how those materials come together, how mechanisms function, and how the final product performs in real-world urban environments. Our in-house production gives us that accountability."

The comprehensive approach supports Seatylock's 3-year warranty program with key registration and replacement services, demonstrating confidence in products manufactured under direct supervision. By maintaining control from concept through completion, the company ensures each lock delivers the certified strength, patented mechanisms, and design excellence that modern urban cyclists require.

Seatylock continues to expand its in-house capabilities, with plans to introduce the ULTRA series in 2026 and develop products specifically for the motorcycle industry. The company's vertical integration model positions it to respond quickly to evolving security challenges while maintaining the quality standards that have defined the brand since 2008.

About Seatylock

Seatylock specializes in design-led mobility security products for modern urban cyclists. The company combines independent security certifications, patented engineering, and rider-friendly design to create bike locks that provide certified protection without compromising usability or style. Founded in 2008, Seatylock

maintains complete in-house production capabilities for its comprehensive range of security products.
