

B.A.P Heating & Cooling Services Ltd. Expands Furnace Repair and Installation Services Across Additional Ontario Communities

July 30, 2026

GUELPH, ON - July 30, 2026 -

B.A.P Heating & Cooling Services Ltd. has announced the expansion of its furnace repair and furnace installation services to additional communities throughout Southern Ontario, extending access to residential heating solutions for homeowners in Breslau, Erin, Waterloo, Kitchener, and Cambridge. The expansion builds on the company's long-standing presence in Guelph, Eden Mills, Rockwood, Elora, and Fergus and reflects continued demand for local heating services across the region.

The expansion follows continued growth in service requests from neighbouring communities seeking experienced local HVAC professionals for furnace repairs, system replacements, and new furnace installations. As more homeowners invest in maintaining ageing heating systems or upgrading to higher-efficiency equipment, access to qualified technicians has become increasingly important, particularly during Ontario's colder months. B.A.P Heating & Cooling Services Ltd. will now provide its established furnace services across a broader geographic area while maintaining its existing service standards and response processes.

Founded in 1997, B.A.P Heating & Cooling Services Ltd. is a family-owned and independently Canadian-owned HVAC company based in Guelph. The business is led by owner Paul Palmer alongside members of his family and has built its reputation by serving homeowners with heating, cooling, indoor air quality, and water heating services throughout the region. The company offers furnace installation, furnace repair, heat pump installation, air conditioner installation, air conditioner repair, duct cleaning, ventilation services, water heater solutions, and additional residential HVAC services.

Expanding furnace services into additional municipalities reflects changes in residential growth across Wellington County, Waterloo Region, and surrounding communities. New housing developments, home renovations, and the ongoing replacement of older heating equipment have contributed to increased demand for qualified HVAC contractors capable of performing installations that comply with Ontario safety standards while providing dependable repair services when heating systems fail unexpectedly.

Many homes throughout these communities contain furnaces that have operated for well over a decade. While regular maintenance can extend equipment life, ageing systems may experience declining efficiency, inconsistent heating, or unexpected breakdowns during periods of heavy winter use. The expanded service area enables homeowners in additional communities to access furnace diagnostics, repairs, replacements, and complete installations from a single regional provider.

The company performs furnace repairs on a variety of residential heating systems and installs equipment selected according to a home's size, heating requirements, and energy-efficiency goals. Installation projects include removal of existing equipment where required, system sizing, installation, safety testing, and final commissioning before the new system is placed into operation. These services complement the company's broader heating and cooling offering, allowing homeowners to address multiple HVAC needs through one contractor.

According to Paul Palmer, owner of B.A.P Heating & Cooling Services Ltd., the expansion represents a natural progression for the business after years of serving customers throughout the surrounding region.

"Over the years, many homeowners outside our original service area have contacted us after hearing about our work through family members, neighbours, or referrals," said Paul Palmer. "Expanding furnace repair and installation into these additional communities allows us to support more Ontario homeowners with the same practical advice, transparent communication, and dependable workmanship that have guided our business since the beginning."

The expanded coverage also supports homeowners planning heating system upgrades before the arrival of

colder weather. Replacing ageing furnaces before an emergency occurs can improve reliability, increase energy efficiency, and reduce the likelihood of unexpected heating failures during periods of peak seasonal demand. The company also assists homeowners who are evaluating repair versus replacement options by providing clear assessments based on the condition and expected performance of existing equipment.

As heating technology continues to evolve, homeowners are increasingly considering high-efficiency furnaces that consume less energy while maintaining consistent indoor comfort. Modern systems often incorporate variable-speed blowers, improved airflow management, enhanced temperature control, and compatibility with smart thermostats. These developments have encouraged many property owners to replace older units as part of broader home efficiency improvements.

The service expansion also supports homeowners exploring long-term energy improvements. B.A.P Heating & Cooling Services Ltd. assists customers with understanding available rebate opportunities related to qualifying heating equipment and provides guidance throughout the application process, where applicable. The company also offers financing options that help make larger HVAC investments more manageable for homeowners planning furnace replacements or complete heating system upgrades.

In addition to residential furnace services, the company continues to provide year-round HVAC support, including air conditioning installation and repair, heat pump installation, boiler services, water heater services, duct cleaning, ventilation improvements, and indoor air quality solutions. This integrated approach enables homeowners to evaluate overall home comfort rather than focusing on a single piece of equipment.

Customer feedback has consistently highlighted responsive service, clear communication, and professional workmanship. Recent reviews describe prompt scheduling, efficient installations, transparent explanations throughout projects, and technicians who take time to discuss available options before work begins. Customers have also noted the company's professionalism during furnace replacements and its attention to completing installations cleanly while minimising disruption inside the home.

The newly expanded service area strengthens the company's ability to respond to heating needs throughout a larger portion of Southern Ontario while remaining focused on local service. As residential communities continue to grow across Waterloo Region, Wellington County, and neighbouring municipalities, demand for experienced HVAC contractors capable of delivering reliable furnace repairs and installations is expected to remain strong.

With the expanded coverage now in place, homeowners across the additional service communities have access to furnace repair and installation services supported by a company that has served Ontario residents

for more than two decades. The expansion represents another step in B.A.P Heating & Cooling Services Ltd.'s ongoing commitment to providing dependable residential heating solutions throughout the region.
